EDUCATION

Bharati Vidyapeeth's College of Engineering for Women

Pune, India

Bachelor of Engineering (Information Technology)

2023 – 2027

CGPA: 8.43/10 (till Sem VI) | Semester VI SGPA: 8.62/10

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, HTML/CSS

Frameworks: Spring Boot, Django, Express.js, Node.js, React

Databases: PostgreSQL, MySQL, MongoDB

Core CS: Data Structures & Algorithms, Object Oriented Programming, Operating Systems, Computer Networks, DBMS

Tools: Git, Linux, Maven, Postman, VS Code

EXPERIENCE

AI & ML Intern

Dec 2024 – Jan 2025

Passion Infotech, Pune

- Developed Journalist Risk Guardian, a Django/Python backend using PostgreSQL, REST APIs, and GIS APIs for location-based risk analysis.
- Built data ingestion pipelines to collect, clean, normalize, and persist external event datasets in PostgreSQL for downstream analysis.
- Implemented rule-based and AI-assisted risk scoring workflows to transform geospatial and event data into location-level threat classifications.
- Developed REST APIs for journalist profiles, alerts, risk analysis, and safe route management.
- Integrated GIS APIs and background processing to automate geospatial analysis and separate processing workloads from request handling.

PROJECTS

Distributed Job Scheduler | Java, Spring Boot, Spring Data JPA, Hibernate, REST APIs, Maven

- Built a distributed scheduler-worker system to schedule, execute, monitor, and retry jobs through REST APIs with separate scheduling and execution services.
- Implemented cron scheduling, worker registration, heartbeat tracking, retry limits, failure handling, and execution history with transactional persistence using Spring Data JPA/Hibernate.
- Applied Factory/Strategy design to support API, Script, and Database executors while separating execution logic from orchestration.
- Validated end-to-end success and failure workflows including retry exhaustion, state transitions, and persisted execution history.

LedgerLens – Evidence-First AI Finance Controller | Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, React, TypeScript, Docker

- Built a financial reconciliation backend with FastAPI, PostgreSQL, SQLAlchemy, and Alembic, implementing Firebase authentication, RBAC-protected REST APIs, transaction management, ownership isolation, and validation.
- Developed all-or-nothing CSV ingestion and normalization for dates, amounts, currencies, debit/credit, and descriptions, preserved exact Decimal values and integrated the pipeline with transaction persistence.
- Built and tested a deterministic reconciliation engine with exact/date-tolerance matching, discrepancy diagnosis, persistent run lifecycle, match/exception storage, summary metrics, idempotency, tenant isolation, filtering, and pagination.

MERN Job Portal | MongoDB, Express.js, React, Node.js, JWT

- Developed a full-stack job portal with recruiter and job-seeker workflows for authentication, job postings, applications, profiles, and user management.
- Built REST APIs and MongoDB schemas with JWT authentication and role-based authorization for secure recruiter and job-seeker operations.
